

Retail Customer Intelligence & Churn Analytics Dashboard

Executive Summary

This dashboard provides a management-ready view of revenue performance, customer segmentation, churn risk, product performance, and geographic opportunities for a retail and e-commerce business.

Metric	Value	Metric	Value
Total Revenue	INR 737,326.88	Total Customers	1,000
Total Products	605	Total Orders	1,000
Average Order Value	INR 737.33	Churn Risk Customers	758
Revenue At Risk	INR 564,003.10	Top Category	Electronics

Key Findings

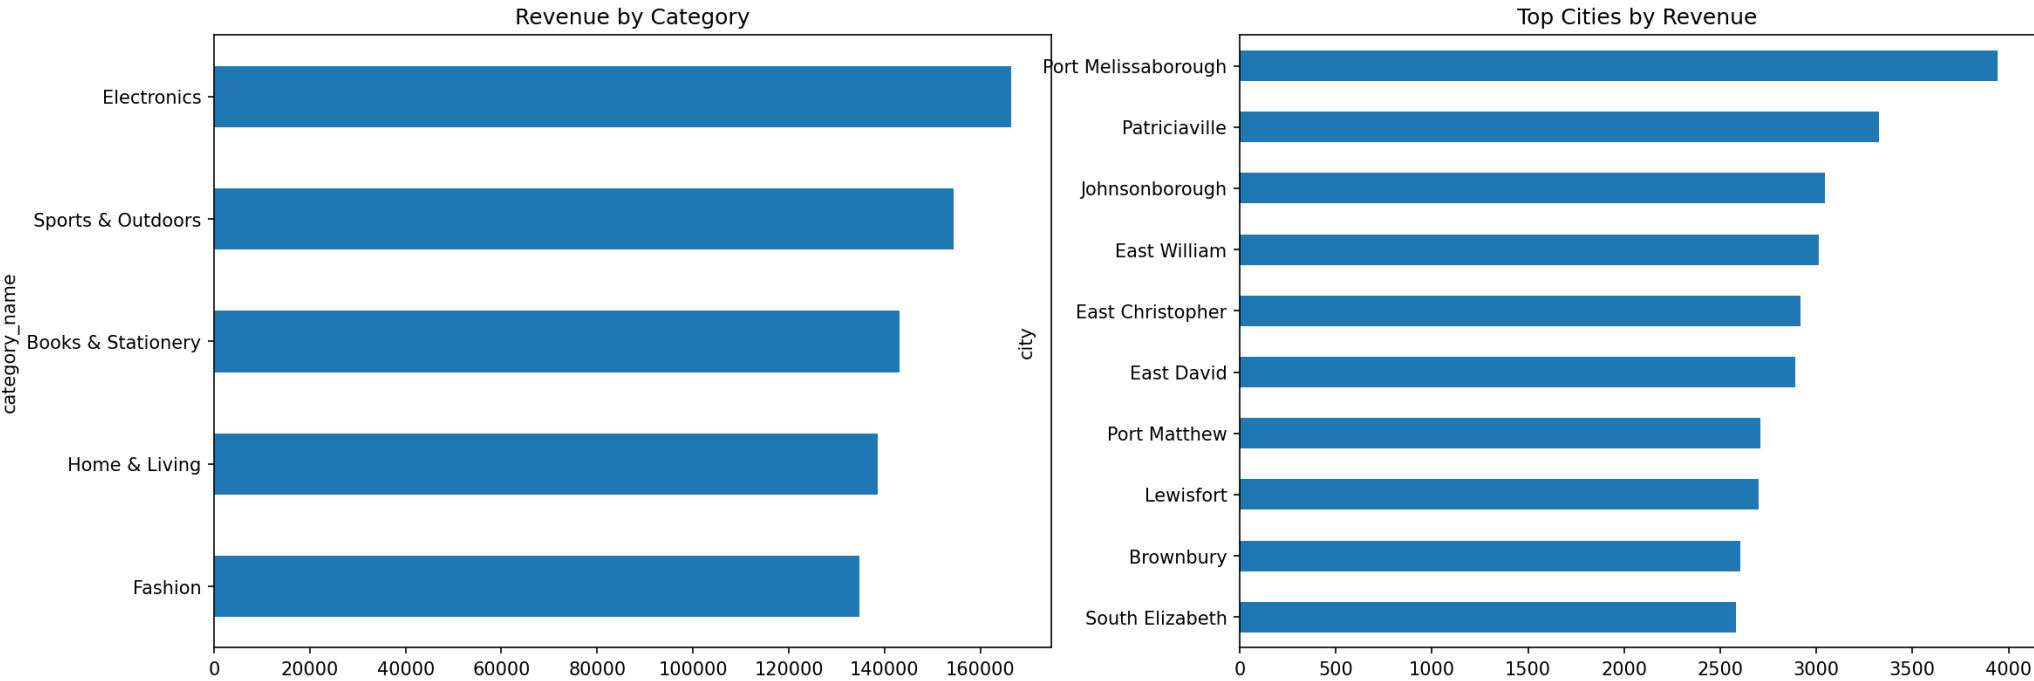

- Electronics is the highest revenue-generating category, making it the priority area for marketing and inventory planning.
- Smartphone is the top revenue product and should be protected from stockouts.
- Port Melissaborough is the leading city by revenue and can be prioritized for regional campaigns.
- Customer segmentation identified VIP (16), Loyal (234), Regular (501), and At Risk (249) customer groups.
- Churn-risk customers represent a major retention opportunity and should receive targeted offers, reminder campaigns, and personalized engagement.

Business Summary

The dashboard helps management identify revenue drivers, high-value customers, churn-risk customers, top products, and high-performing cities. It supports better decisions for marketing, customer retention, inventory planning, and revenue growth.
